INTRODUCTORY PROFILE

Software engineer with 5 years of experience specializing in front-end development, but with a solid understanding of technologies for back-end as well. I speak English, Spanish, and Portuguese fluently. I am very passionate about crafting high-quality software that enhances the user experience and drives business success forward. In addition to my software engineering skills, in my previous career I was a freelance graphic designer, 3D artist and audio engineer/producer. I was also privileged to be able to tour the world as a professional musician.

EXPERIENCE

CacheHeap | Software Engineer | Frontend

May 2021 - Present (2 years)

- Work as a frontend developer, contributing to multiple projects for diverse clients.
- Some of these contracts have included AIG, NYU and Coe.
- Fast paced team environment, collaborating with UI/UX designers, DevOps specialists, and Scrum Masters.
- Emphasize code flexibility and scalability for clients allowing for future expansion and customization.

MealBox | Software Engineer | Fullstack

Nov 2019 - Apr 2021 (1 year 6 months)

- Developed a React Native app for a San Francisco based start-up aimed at reducing food waste by restaurants.
- App built with React Native, React, Redux, JavaScript, MongoDB, Docker, bundled by Webpack and styled with TailwindCSS.
- Implemented geolocation features to help users find available food through their app.

BlackTies | Developer Internship / Jr. Frontend

Feb 2019 - Sep 2019 (8 months)

- Responsible for developing a new UI for their client CalCPA which allowed students to do advanced course searching.
- Desktop application built using React and handled server-side rendering through Next.js.
- Maintained their mobile React Native app alongside its similar features.

SKILLS

Front-end Development:

- React • TypeScript • Redux • React Native • JavaScript • Webpack • Next.js • Gatsby.js Tailwind • Framer-Motion
- Chakra-UI • React-Bootstrap • Theme-UI • Material-UI • Bootstrap • Three.js • React-Three-Fiber • HTML5 • CSS

Back-end Development:

- Node.js • Python • Pydantic • FastAPI • GraphQL

Testing and Quality Assurance:

- Jest • Mocha • Enzyme • React Testing Library • Pytest

Databases, DevOps, and Tools:

- MongoDB • PostgreSQL • AWS • Docker • Apollo • Git • Bash • WebGL • Postman • Insomnia • Jira • Figma • CMS

PROJECTS

instaLinked | [Chrome Webstore](#) | [GitHub](#) | [Demo Video](#)

- Developed a Chrome extension to automate LinkedIn connection requests, enhancing user efficiency in networking and lead generation efforts.
- Implemented seamless variable extraction from LinkedIn profiles, enabling users to personalize messages with extracted data such as names, companies, and positions.
- Integrated Tailwind CSS and JavaScript to design an intuitive and responsive UI, offering users an accessible and user-friendly experience in customizing message templates.

Blisstify | [GitHub](#) | [Website](#)

- Developed Blisstify, a user-friendly React web app that allows users to build custom Spotify playlists and includes a 30-second preview of each track.
- Enables users to name and save playlists directly to their Spotify account using OAuth2.
- Utilizes Redux and RTK to manage search query and playlist data states, streamlining the playlist creation process.

leelo | [GitHub](#) | [Website](#)

- Developed leelo, a web app built with React and Redux, utilizing the power of the Reddit and Google Translate APIs.
- The app offers a minimalist version of Reddit, with all content automatically translated into Spanish, making it accessible to a wider audience.
- Styled with Tailwind framework and adorned with Heroicons, the app is bundled with Webpack and polyfilled by Babel.
